

Institute of Biology and Earth Sciences

winter semester:

Module I MODERN LABORATORY TECHNIQUES IN EARTH AND ENVIRONMENTAL SCIENCES

Human biomonitoring as a tool for chemical exposure assessment	30 ECTS
Geographical information systems (QGIS)	
Atomic absorption spectroscopy – how to quantify metals in environmental samples	
Microscopy in environmental studies	
Protein extraction and separation	

Module II ECOTOURISM I

Travel photography	30 ECTS
National parks in the world: nature and management	
Outdoor navigation	
Tourism and culture in Latin America	
Ecotourism and sustainability	

summer semester:

Module I ANTHROPOCENE

GIS in disaster prevention	30 ECTS
Human impacts on landscape	
Past and contemporary climate change	
Living in a polluted environment	
Wildlife rehabilitation principles	

Module II ECOTOURISM II

Weather and climate in tourism and travel	30 ECTS
Iconic landscapes as tourist destinations	
Tatra Mts & Zakopane	
Bees, apitourism and apitherapy	
Tourism on volcanoes	

Course card

Course title	Geographical Information Systems (QGIS)		
Semester (winter/summer)	winter	ECTS	6
Lecturer(s)	Rafał Krocak PhD		
Department	Department of Physical Geography		

Course objectives (learning outcomes)

After completing the course the student will recognize the most common types of spatial data and their extensions, as well as the methods of their acquisition. The student will be able to create digital maps, analyze them and prepare them for publication. The student will also know how to perform basic GIS analyzes.

Prerequisites

Knowledge	Basic knowledge of cartography.
Skills	Basic computer skills, knowledge of Microsoft or/and Libre Office package.
Courses completed	-

Course organization

Form of classes	W (Lecture)	Group type					
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)
Contact hours				15			

Teaching methods:

The course is conducted with QGIS software. It is recommended to use personal laptops.

Assessment methods:

Other	Written exam	Oral exam	Written assignment (essay)	Students presentation	Discussion participation	Group project	Individual project	Laboratory tasks	Field classes	Classes in schools	Didactic games	E – learning
						successful completion of all						

Assessment criteria	Pass: on the basis of successful completion of all exercises ordered by the teacher during the laboratory sessions (all partial exercises must be completed). Each student may be absent from a maximum of 2 sessions for whatever reason.
---------------------	--

Comments	Each lecturer sets the method and date of delivering the exercise for final exam
----------	--

Course content (topic list)

<ol style="list-style-type: none"> 1. Introduction to QGIS. Functionalities and extensions. 2. Layers and their properties. Attribute table. 3. Geoprocessing and analysis tools 4. Working with the digital elevation model 5. Filtering and spatial queries 6. Spatial relations 7. Raster data and algebra maps 8. Final editing of maps (linear scale, legend, cartographic grid, descriptions, map orientation).

Compulsory reading

<p>Bryndal, T., Krocak, R. (2019). Reconstruction and characterization of the surface drainage system functioning during extreme rainfall: the analysis with use of the ALS-LIDAR data—the case study in two small flysch catchments (Outer Carpathian, Poland). <i>Environmental Earth Sciences</i>, 78(6), 1-16.</p> <p>Fidelus-Orzechowska J., Wrońska-Wałach D., Cebulski J., Żelazny M. Course card

Course title	Atomic absorption spectroscopy – how to quantify metals in environmental samples		
Semester (winter/summer)	winter	ECTS	6
Lecturer(s)	Assoc. Prof. Łukasz Binkowski		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

The course considers modern laboratory techniques and methods for measuring metal concentrations (mercury, cadmium, lead, and others) in environmental samples. The main emphasis is put in the course on the following:

- preparation of samples for metal analyses
- flame and electrothermal atomic absorption spectroscopy
- cold vapor atomic absorption spectroscopy
- quality control system in instrumental laboratories

Students learn how the techniques work and can try themselves as analysts

Prerequisites

Knowledge	principles of chemistry, physics and mathematics
Skills	communicative English
Courses completed	-

Course organization								
Form of classes	W (Lecture)	Group type						
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)	
Contact hours				15				

Teaching methods:

Laboratory classes with samples preparation and analysis with different atomic absorption spectroscopy techniques. Preparation of report from laboratory classes including method description and results obtained

with the instrument. Individual work of students outside of the classroom (reading scientific articles, consultation with the course lecturer and working on the individual report from laboratory classes).

Assessment methods:

	E – learning	Didactic games	Classes in schools	Field classes	Laboratory tasks	Individual project	Group project	Discussion participation	Students presentation	Written assignment (essay)	Oral exam	Written exam	Other
					X	X		X		X			

Assessment criteria

The student graduate from the course based on active attendance at the laboratory classes. The quality of the report from the laboratory activities will be assessed

Comments

Course taught in English.

Course content (topic list)

1. Introduction to sampling methods of environmental samples.
2. Preparation of the samples collected for further analyses.
3. Method of instrument calibration.
4. Flame and electrothermal atomic absorption spectrometry.
5. Cold-vapour atomic absorption spectrometry.
6. Results recalculations.
7. A quality control system in instrumental laboratories

Compulsory reading

Binkowski Ł.J., Meissner W., Trzeciak M., Izevbekhai K., Barker J. 2016. Lead isotope ratio measurements as indicators for the source of lead poisoning in Mute swans (*Cygnus olor*) wintering in Puck Bay (northern Poland). *Chemosphere* 164, 436–442.”

Course card

Course title	Human biomonitoring as a tool for chemical exposure assessment		
Semester (winter/summer)	Winter	ECTS	6
Lecturer(s)	dr Martyna Błaszczyk-Altman		
Department	Institute of Biology and Earth Sciences, Chair of Genetics, UKEN		

Course objectives (learning outcomes)

Regardless of the place of residence, we are constantly exposed to xenobiotic substances, which are released into the environment because of natural processes and anthropogenic activities. The task of human biomonitoring is to continuously monitor the concentration of these substances and/or their metabolites in bodily fluids and human tissues (including skin derivatives). The main aim of the course is to present the differences between human and environmental biomonitoring. Why is human biomonitoring (HBM) so important nowadays? What are the main sources of human exposure to chemical substances? In which matrices can these chemicals be detected? How should HBM research be properly conducted? During the course, students will find answers to these and other questions and gain hands-on experience in working with human-derived material.

Prerequisites

Knowledge	
Skills	Principles of chemistry and biology.

Course card

Course title	Microscopy in environmental studies		
Semester (winter/summer)	winter	ECTS	6
Lecturer(s)	Assoc. Prof. Gabriela Gołębiewska-Paluch		
Department	Institute of Biology and Earth Sciences, Chair of Genetics, UKEN		

Course objectives (learning outcomes)

The course presents general principles of microscopy and how it is used to study environmental samples. It contains presentation of the structure and principle of operation as well as the possibility of practical use of the light microscope, fluorescence microscope, Nomarski contrast, dark field and polarized light microscope. During the course students will exercise various methods of preparation, staining and imaging possibilities as well as they will observe environmental objects like microbial, plant and animal samples from water, soil and other environmental samples. In addition, it will be possible to observe crystalline and paracrystalline substances in polarized light.

Prerequisites

Knowledge	Principles of biology
Skills	English medium stage
Courses completed	-

Course card

Course title	Ecotourism and sustainability		
Semester (winter/summer)	winter	ECTS	6
Lecturer(s)	Assoc. Prof. Joanna Zawiejska		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

The course focuses on the relationship between ecotourism development and environmental quality. Current trends in ecotourism and nature tourism are discussed, their potential advantages and impacts, and their significance for sustainable development, biodiversity conservation and natural areas in the context of ongoing global environmental change. After completing the course, the student is able to indicate and characterise the positive and potentially negative practices in ecotourism and their effects, describe the relations and between climate change and tourism.

Prerequisites

Knowledge	The student has sufficient understanding of environmental processes and current global environmental change

Course card

Course title	Human impacts on landscape		
Semester (winter/summer)	summer	ECTS	6
Lecturer(s)	Assoc. Prof. Joanna Zawiejska		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

The course explores human agency in transforming various geomorphological landscapes as well as the causes and effects of the modification of the operation of geomorphic processes. Interactions between natural and anthropogenic conditions for development of landforms are discussed based on case studies from different environments.

Prerequisites

Knowledge	Basic geomorphology, geology, climate, hydrology.
Skills	-
Courses completed	-

Course organization								
Form of classes	W (Lecture)	Group type						
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)	
Contact hours			15					

Teaching methods:

Following introductory lectures students prepare presentations and discuss assigned topics.

Assessment methods:

Other	Written exam	Oral exam	Written assignment (essay)	Students presentation	Discussion participation	Group project	Individual project	Laboratory tasks	Field classes	Classes in schools	Didactic games	E – learning
	x			x	x		x					

Assessment criteria	Presentations (30%) and final test (70%)

Course card

Course title	Living in a polluted environment		
Semester	summer	ECTS*	6
Lecturer(s)	Assoc. Prof. Łukasz Binkowski		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

Heavy metals, pesticides, smog, PAHs and dioxins – every day we hear about the different elements and chemicals that threaten the biosphere, including man. What is the real risk? How to defend against them? Are these threats real or just catchy slogans? And why all of this combines ecology? The course is going to answer these questions. Participants will discuss the major threats to the environment, the mechanisms of circulation and detoxification as well as the impact of toxic substances on populations and ecosystems. They will also participate in the scientific project in the field of ecotoxicology.

Prerequisites

Knowledge	-
Skills	English: speaking, reading and writing
Courses completed	-

Course organization

Form of classes	W (Lecture)	Group type						
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)	
Contact hours			10	5				

Teaching methods:

Lab classes and tutoring discussions accompanied with multimedia presentations, scientific movies, publications and e-learning platform activities.
 Individual work of students outside of the classroom (scientific research – individual project, reading popular-scientific and scientific articles).

Assessment methods:

E – learning	Didactic games	Classes in schools	Field classes	Laboratory tasks	Individual project	Group project	Discussion participation	Students presentation	Written assignment (essay)	Oral exam	Written exam	Other

Course card

Course title	Wildlife rehabilitation principles		
Semester (winter/summer)	summer	ECTS	6
Lecturer(s)	Katarzyna Kucharska, PhD		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

The aim of the course is to familiarize students with aspects of wildlife rehabilitation methods according to various species. Students will learn about the anatomy, biology and behavior of different animals which is crucial to provide top-quality care and welfare for wildlife patients. Students will gain knowledge of ethical principles and legal regulations concerning aspects of wildlife rehabilitation, knowledge in laboratory skills and research methods for the post-release monitoring of the species.

Prerequisites

Knowledge	Basic biology
Skills	None
Courses completed	none

Course card

Course title	Weather and climate in tourism and travel		
Semester (winter/summer)	summer	ECTS	6
Lecturer(s)	Bartłomiej Pietras, PhD		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

The aim of the course is to expand knowledge about weather and climate conditions in different parts of the world. The student acquires the ability to effectively look for and practically use meteorological knowledge, and interpret available weather information in planning travel and tourist events.

Prerequisites

Knowledge	To participate in the course, the student should know basic terms in the field of meteorology and climatology
Skills	The ability to link cause and effect, analyze and synthesize and select thematic information from scientific publications and media sources.
Courses completed	not applicable

Course organization								
Form of classes	W (Lecture)	Group type						
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)

Course card

Course title	Bees, apitourism and apitherapy		
Semester (winter/summer)	summer	ECTS	6
Lecturer(s)	Anna Chrobak-Žuffová, PhD		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

After completing the course, the student has knowledge about honey bees - their characteristics, lifestyle and importance for the natural environment. The student can recognize authentic bee products and benefits (their purpose in the natural supplementation of the human body). The student is aware of the significance of protection of honey bees for their continued existence on Earth by planting honey plants and supporting local beekeepers. The student recognizes the specifics of apitourism and analyses its potential for sustainable tourism.

Prerequisites

Knowledge	General knowledge of natural environment on the world
Skills	
Courses completed	-

Course organization								
Form of classes	W (Lecture)	Group type						
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)	
Contact hours				15 (L)				

Teaching methods:

Analysis of source materials regarding honey bee specifications. A field visit to educational apiary. Analysis of bee products combined with their tasting. Discussion on various ways to help honey bees survive.

Assessment methods:

E – learning	Didactic games	Classes in schools	Field classes	Laboratory tasks	Individual project	Group project	Discussion participation	Students presentation	Written assignment (essay)	Oral exam	Written exam	Other
		x	x			x	x					

Assessment criteria	Attendance in class, active participation in discussions, preparation of group work as directed by the instructor.
---------------------	--

Comments	Field classes will take place in close contact with bees. A tasting of bee products is also planned. People allergic to bee venom or other bee products are obliged to report it to the lecturer before starting the course. The class is taught by a professional beekeeper and educator.
----------	---

Course content (topic list)

<ol style="list-style-type: none"> 1. Bee as species 2. Significance of bees to the environment, bee diseases and other threats to bees. 3. Visit to educational apiary 4. Specifics of authentic and fraudulent bee products. Benefits and nutrition values of bee products. 5. Apitourism and apitherapy and its potential for development of sustainable tourism. 6. Apitourism in Lesser Poland region – local examples.

Course card

Course title	Iconic landscapes as tourist destinations		
Semester (winter/summer)	summer	ECTS	6
Lecturer(s)	Assoc. Prof. Joanna Zawiejska		
Department	Department of Physical Geography		

Course objectives (learning outcomes)

Understanding of the reasons for the diversity of landscapes in the world. Understanding of the origin and characteristics of the most visited and iconic landscapes of the world. Understanding of impacts and hazards posed by potential and ongoing processes (e.g. avalanches, rockfalls) to tourism development and the effects of (over)tourism on these landscapes. Significance of landscapes to local native cultures.

Prerequisites

Knowledge	Basic knowledge about environment.
Skills	Understanding the basic interrelationships between elements of the environment, origin of the basic types of landscapes.
Courses completed	Physical Geography or Tourism Regions (recommended)

Course organization									
Form of classes	W (Lecture)	Group type							
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)		
Contact hours			15						

Teaching methods:

The course will consists of 5 thematic blocks, each block will have a theoretical background followed by student-prepared presentations based on literature and discussion of the main theme of the lesson.

Assessment methods:

Other	Written exam	Oral exam	Written assignment (essay)	Students presentation	Discussion participation	Group project	Individual project	Laboratory tasks	Field classes	Classes in schools	Didactic games	E – learning
			x	x	x		x					

Assessment criteria	literature research and presentation of assigned topics (30%) class-based discussion (20%) submission of a written assignment on the assigned topic (50%)

Course content (topic list)

Iconic and most visited landscapes of the world: what makes a landscape a popular tourist destination?
 Interaction of rivers and geology (e.g. Niagra Falls, Iguazu Falls, Victoria Falls).
 Sandstone, granite and karst landscapes of the world.
 Diversity of active volcanic landforms.
 Iconic landscapes of the world (e.g. Grand Canyon, Karst of Ha Long Bay, the Dolomites...).
 Natural hazards and tourism.
 Native cultures and landscapes.
 The curse of popularity: challenges and management of overtourism at iconic landscape destinations.

Course card

Course title	GIS in natural disaster prevention		
Semester (winter/summer)	summer	ECTS	6
Lecturer(s)	Ph.D. Paweł Kroh		
Department	Institute of Biology and Earth Sciences		

Course objectives (learning outcomes)

Course presents the use of Geographical Information Systems in prevention of landslides and floods. During classes students will learn (i) how to use raster and vector data to identify flood hazard areas; (ii) how to use digital elevation models for landslide mapping. Use of GIS in mountain rescue and avalanche prediction will also be presented.

Prerequisites

Knowledge	
Skills	Basic GIS skills
Courses completed	

Course organization								
Form of classes	W (Lecture)	Group type						
		A (large group)	K (small group)	L (Lab)	S (Seminar)	P (Project)	E (Exam)	
Contact hours				15				

Teaching methods:

At the beginning of the course short lecture will be presented. Then, after a brief introduction and instructions to each topic students will proceed with laboratory tasks realized in GIS software.

Assessment methods:

Other	Written exam	Oral exam	Written assignment (essay)	Students presentation	Discussion participation	Group project	Individual project	Laboratory tasks	Field classes	Classes in schools	Didactic games	E-learning
			x					x				

Assessment criteria Proper execution of given tasks, essay.

Comments

Course content (topic list)

1. Flood prevention project:
 - a) Presentation of national Polish data: flood risks maps and cartographic databases (BDOT10k)
 - b) Downloading data and their conversion to required formats
 - c) Georeferencing flood hazard maps
 - d) Vectorization areas with flood hazard
 - e) Selection of objects (residential buildings, hospitals, schools etc.) that are at risk
2. Landslides prevention project:
 - a) Presentation of digital elevation models (DEM) based on LIDAR
 - b) DEM conversion
 - c) Landslides mapping and vectorization
 - d) Selection of buildings which are localized on landslides areas
